

# Logician Personality

INTP-A / INTP-T

# Strengths & Weaknesses

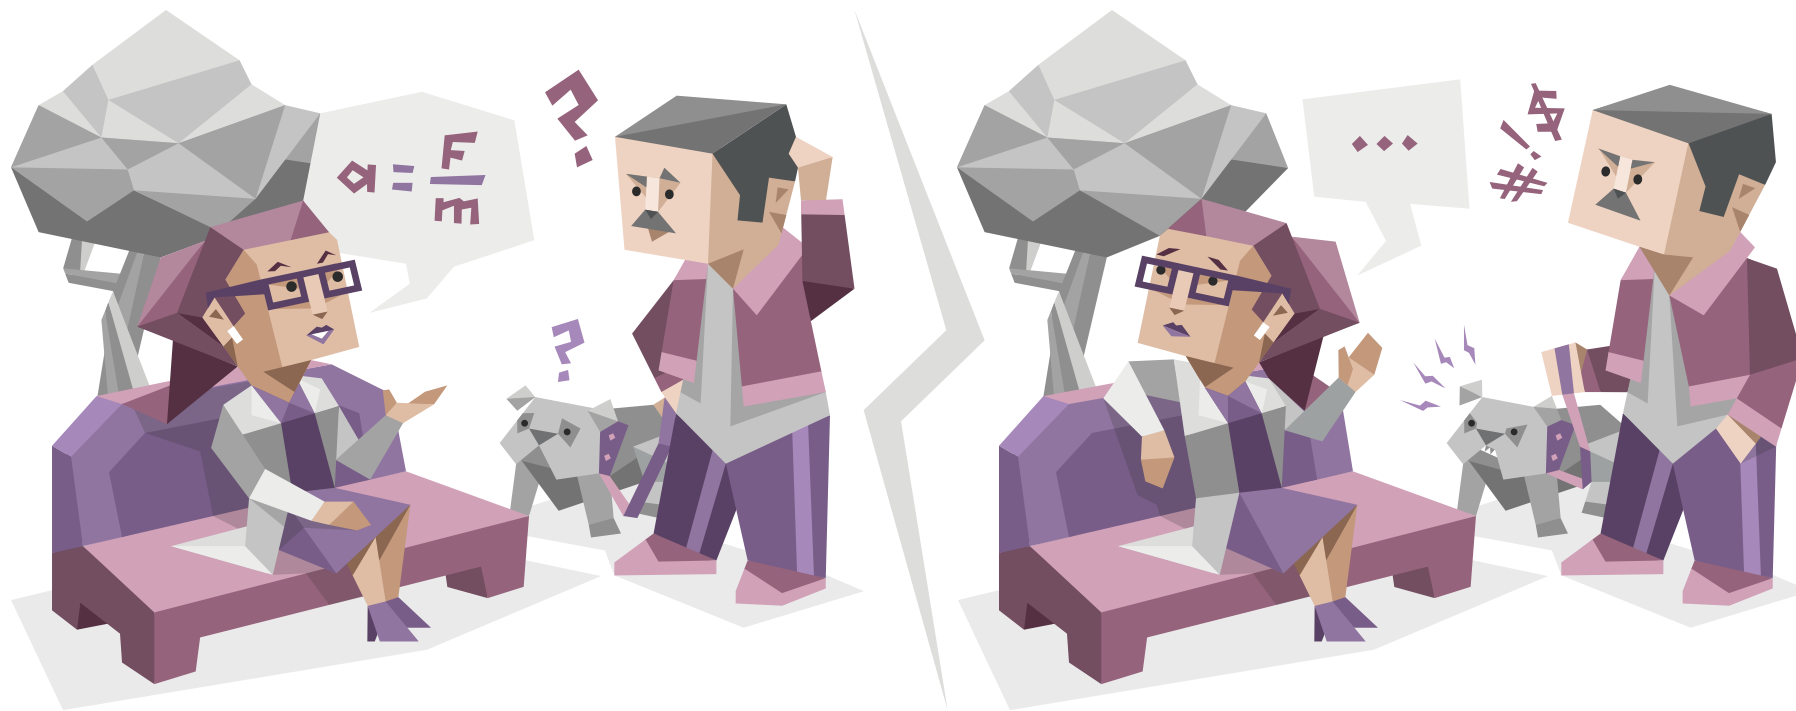

## Logician (INTP) Strengths

- **Analytical** – Logicians analyze everything that they come across, from research data to the behavior of the people around them. This gives them a knack for spotting unexpected patterns and connections that other personality types might overlook.
- **Original** – Thanks to their unrelenting imagination, Logicians can come up with creative, counterintuitive ideas that wouldn't occur to most people. Not all of these ideas are feasible, of course, but Logicians' willingness to think outside the box can produce remarkable innovations.
- **Open-Minded** – Logicians are driven by curiosity and an intense desire to learn everything that they can. People with this personality type tend to be receptive to new ideas and ways of doing things – as long as those ideas are supported by sound reasoning.

- **Curious** – These personalities are always casting about for new pursuits, hobbies, and areas of research. One week, they might be obsessed with geophysics, and the next, they might lose themselves in videos about guitar building. When inspiration strikes, Logicians go all in on their newfound interest, learning everything that they can.
- **Objective** – Logicians care about the truth. Rather than taking comfort in ideology or received ideas, they want to understand what's really going on beneath the surface of things. As a result, they can be relied upon to combat bias and misinformation, even when it isn't easy to do so – and they expect other people to be honest with them in return.

## Logician (INTP) Weaknesses

- **Disconnected** – Logicians can get lost in their own train of thought, even when they're with other people. When these personalities finally resurface with something to say, they may find that the conversation has moved on without them. This can cause them to feel disconnected from other people, especially in large social gatherings.
- **Insensitive** – People with this personality type see rationality as the key to a better, happier world. At times, they may underestimate the importance of such irrational values as emotion, compassion, etiquette, and tradition. As a result, they may inadvertently come across as

insensitive or unkind, even though their intentions are generally good.

- **Dissatisfied** – Logicians can't help but imagine how things could be better than they already are. These personalities are constantly on the lookout for problems to solve, topics to learn, and new ways to approach things. Taken too far, this mindset can become overwhelming, with Logicians constantly trying to reinvent the wheel rather than reliably addressing their needs and responsibilities.
- **Impatient** – Logicians take pride in their knowledge and in sharing their ideas. When it comes to explaining their rationale, however, they aren't always patient. If their conversation partner doesn't follow along or seem sufficiently interested, Logicians may give up with a dismissive "never mind."
- **Perfectionistic** – Logicians *want* to get things done, but their quest for perfection can get in the way. At times, these personalities may get so lost in analyzing various options that they never reach a decision. They may also give up on projects that don't match the ideal vision in their mind.
